

A joint poster project of the Muskegon Area Intermediate School District and the Michigan Council on Economic Education.

The 6 Core Economics Principles represent six powerful ideas that explain the economic behavior of the people. You and your students will discover new insights as you apply these principles to all the choices people make in the study of:

- Economics
- History
- Geography
- Government
- Civics
- Psychology

Whatever your discipline or grade level, The 6 Core Economic Principles will bring focus to your instruction and better understanding to your students.

The 6 Core Economic Principles are closely aligned with the Content Strands, Standards and Benchmarks of the Michigan Curriculum Frameworks for Social Studies and the Voluntary National Content Standards in Economics of the National Council on Economic Education. The economics vocabulary on the poster (Highlighted in **BOLD**) emphasizes the important concepts that ALL students need to know and be able to use.
